ELT Data Pipeline with Snowflake and Python University of California, San Diego, CA

Group Project for Business Analytics Summer 2025

- Built an end-to-end ELT pipeline with Python and Snowflake to integrate CSV purchase orders, XML invoices, PostgreSQL data, and NOAA weather datasets.
- Built automated Python scripts to extract, clean, and load 40+ CSV purchase order files and supplier invoices into Snowflake, applying transformations via SQL executed in Python.
- Created and optimized database schemas, tables, and materialized views in Snowflake to calculate differences between invoiced and quoted amounts.
- Linked weather data with supplier zip codes to assess impacts on order fulfillment.
- Ensured scalability with Snowflake's COPY INTO and FILE FORMAT features for large-scale data processing.

PERSONAL ACHIEVEMENT

- Completed first full marathon in 2024 and awarded a cash prize of RMB 300 for performance
- Maintained a consistent running routine for nine years, progressing from 3 km to 9 km daily.

SPECIALIZED SKILLS

Technical Skill: Python, SQL, Excel
